Demonstration of Proposed Features

Project Demonstration Guidelines - Rising Waters

1. Demo Scenarios Checklist

When presenting this project, input these configurations to demonstrate the system's accuracy and validation checks:

Scenario 1: Low Flood Risk (Safe Weather)

- Goal: Show normal weather conditions output.
- Input Values:
- *Cloud Cover*: `15.0%`
- *Annual Rainfall*: `1200.0 mm`
- *Jan-Feb Rainfall*: `10.0 mm`
- *Mar-May Rainfall*: `80.0 mm`
- *Jun-Sep Rainfall*: `700.0 mm`
- Expected Result: Redirects to green Low Flood Risk Detected screen with high confidence score and normal monitoring guidelines.

Scenario 2: High Flood Risk (Warning Alert)

- Goal: Show hazard warning and evacuation advice output.
- Input Values:
- *Cloud Cover*: `90.0%`
- *Annual Rainfall*: `4500.0 mm`
- *Jan-Feb Rainfall*: `90.0 mm`
- *Mar-May Rainfall*: `600.0 mm`
- *Jun-Sep Rainfall*: `3200.0 mm`
- Expected Result: Redirects to red High Flood Risk Detected! warning screen with a confidence bar and action steps.

Scenario 3: Validation Edge Cases (Error Blending)

- Goal: Show front-end and back-end form protections.
- Input Values:
- *Negative check*: Set Annual Rainfall to `-1500 mm`. Expect a blocking validator message.
- *Logical sum check*: Set Annual Rainfall to `1000 mm` and June-September Rainfall to `1500 mm`. Expect a warning saying seasonal totals cannot exceed annual totals.
