

Project Executable Files

Date	30 June 2026
Team ID	XXXXXX
Project Name	Rising Waters – AI-Powered Flood Prediction and Early Warning System
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

rising-waters/
├── app/
├── data/
├── frontend/
├── static/
├── models/
├── Project-documentation/
├── main.py
├── app.py
├── README.md
├── requirements.txt
├── runtime.txt
├── Procfile
├── vercel.json
├── test_vercel_app.py
├── notebook.ipynb
└── train.py
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://rising-waters-nexus-ai-assistant.vercel.app/
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Vercel
Repository Link	https://github.com/pallavisowreddi/Rising-Waters
Demo Video Link	Google Drive Link

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Python 3.12 or above
- Visual Studio Code
- Git (Optional)
- Internet connection (for installing dependencies)

Step 1: Clone the repository

git clone <https://github.com/pallavisowreddi/Rising-Waters.git>

Step 2: Open the project folder

cd rising-waters

Step 3: Install the required dependencies

pip install -r requirements.txt

Step 4: Train the machine learning model

python train.py

Step 5: Start the Flask application

python app.py

Step 6: Open your browser and visit

<http://127.0.0.1:5000>

Enter the required values (Cloud Cover, Annual Rainfall, Jan-Feb Rainfall, Mar-May Rainfall, and June-September Rainfall) and click "Predict Flood Risk" to view the predicted Flood Prediction and Early Warning System score and development category.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Application runs locally only	Fully resolved (deployed live on Vercel)
2	Limited dataset size	Larger datasets can improve predictions
3	XGBoost Classifier model only	XGBoost Classifier model deployed with 96.55% accuracy
