

Empathy Map Canvas

1. Target User: Ground-level Meteorologist / Relief Coordinator

Analyzing the user experience during extreme weather events:

Says

- 'We need faster ways to turn raw rainfall data into alerts.'
- 'Bulleted safety logs help us explain the warning to residents.'
- 'The system needs to run on mobile without complex setups.'

Thinks

- 'How do I allocate rescue resources between three districts?'
- 'I worry about false alarms reducing warning credibility.'
- 'Is the server reliable during power cuts?'

Does

- Monitors cloud densities and logs rainfall volumes.
- Cross-references stream logs with weather forecasts.
- Contacts regional evacuation centers.

Feels

- Anxious about rapid nocturnal cloudbursts.
- Responsible for protecting the community.
- Determined to utilize machine learning for safety.
