

Technology Stack Layout

1. Frontend Architecture

- Layout: HTML5 and Jinja2 Template Engine.
- Styling: Bootstrap 5 CSS framework for responsive elements.
- Custom CSS: Custom glassmorphic cards, Outfit typography, and dark navy radial gradients.
- Client Utilities: marked.js for documentation parsing, KaTeX for math formula rendering.

2. Backend & Deployment

- Application Server: Flask micro-framework.
- Serverless Hosting: Deployed on Vercel utilizing Serverless Python Functions.
- Codebase Sync: Automatic deployment trigger via GitHub repository push.

3. Model Execution

- Pure Python compiled Decision Tree Classifier (zero-dependency, under 12 MB zip footprint).
