

Problem-Solution Fit Analysis

Strategic Fit Mapping

Aligning user struggles with engineered features of the Rising Waters app:

- Struggle: Heavy packages cause Vercel build failures. Fit: Refactored models to a pure Python Decision Tree, reducing size by 98%.
- Struggle: Typos cause invalid outcomes. Fit: Backend validator checks range bounds and seasonal sum limits.
- Struggle: Full-page reloads disrupt coordination. Fit: AJAX submission outputs results inline in real-time.
